Cardiovascular Medicine Makes A

Key Terms. cardiovascular centre: A region of the brain responsible for nervous control of cardiac output. The cardiovascular center forms part of the autonomic nervous system and is responsible for regulation of cardiac output. Located in the medulla oblongata, the cardiovascular center contains three distinct components: the cardioaccelerator center, the cardioinhibitor center, and the vasomotor center.

Brigham and Women's Hospital The
cardiovascular system, composed of the
heart and blood vessels, is responsible for
circulating blood throughout your body to
supply the tissues with oxygen and
nutrients. The heart is the muscle that
pumps blood filled with oxygen and
nutrients through the blood vessels to the
body tissues. It is made up of:

Cardiovascular System Physiology

Functions of the Cardiovascular System.

The cardiovascular system has three major functions: transportation of materials, protection from pathogens, and regulation of the body's homeostasis. Transportation:

The cardiovascular system transports blood to almost all of the body's tissues.

The blood delivers essential nutrients and oxygen and removes wastes and carbon dioxide to be processed or removed from the body.

The first "wearable" in cardiovascular
medicine dates back to the 1800s when a
watch with a second hand was used to
measure heart rate. Today, however,
wearables are more likely to be patient
initiated, measuring everything from heart
rate and rhythm to blood pressure, sleep
quality and duration, and physical activity.
