The Pattern on the Stone by Daniel Hillis. A one-paragraph explanation of how a computer works from Danny Hillis\u2019s The Pattern on the Stone (which you should read if you\u2019re interested in how computers work but don\u2019t really know): \u201cThe work performed by the computer is specified by a program, which is written in a programming language. This language is converted to sequences of machine-language instructions by interpreters or compilers, via a predefined set of subroutines called the ...

The Pattern on the Stone by Daniel Hillis

Hillis, the head of Disney\u2019s Imagineering Works, begins by describing a stone etched in a complex pattern, which can be asked questions in a strange language and give profound and useful answers. It sounds like witchcraft, but it is a literally accurate description of a computer chip. As he goes on to show, the internal workings of a computer can be broken down into simple components.

THE PATTERN ON THE STONE by W. Daniel Hillis | Kirkus Reviews

Natural Stone Laying Pattern. When laying your natural stone we strongly recommend that you lay it completely random with no repeating pattern. Having said that, we do understand that it\u2019s nice to have a bit of inspiration to get you going. With this in mind above you can find an example laying pattern using all four sizes.

Ancient stone patterns add new wrinkle to pipeline debate

Patterned ground is the distinct and often symmetrical natural pattern of geometric shapes formed by ground material in periglacial regions. It is typically found in remote regions of the Arctic, Antarctica, and the Outback in Australia, but is also found anywhere that freezing and thawing of soil alternate; patterned ground has also been observed on Mars.

Patterned ground - Wikipedia

Raw stone is then hand split, faced, shaped, cut and flamed by some of the best in the business to make our products stand out from the rest. Over the past 3 years we have kept our main focus on supplying other local stone retailers so our stone can already be seen all over Muskoka.

It's called efflorescence. Basically, the chemical reaction that produces concrete leaves a lot of assorted chemical salts behind. These are water soluble, so if there's water moving through the concrete, they can get drawn out and deposited on the surface (where many of the salts can react with air and change into non-soluble minerals).
